In both the arms and the legs, the half closest to the body has one strong, thick, long bone. The other half of the arm or leg, the part farthest from the body, has two thinner bones. There are 206 bones in the entire human body, so the skeletal structure of the legs and arms are actually quite simple.

The main or primary bronchi enter the lungs at the hilum and initially branch into secondary bronchi also known as lobar bronchi that supply air to each lobe of the lung. The lobar bronchi branch into tertiary bronchi also known as segmental bronchi and these supply air to the further divisions of the lobes known as bronchopulmonary segments.Each bronchopulmonary segment has its own (segmental ...

I ett mänskligt embryo börjar hjärtat att slå cirka tre veckor efter befruktningen eller fem veckor efter den sista normala menstruationsperioden (LMP), vilket är det datum som normalt används för att datera graviditet.Embryots hjärtfrekvens ökar nionde veckan efter LMP. Ökningen är ungefär 3,3 slag/minut per dag. Därefter sjunker den ner till omkring 150 slag per minut under de ...
