About This Calculator. This peer-reviewed online calculator uses the Pooled Cohort Equations to estimate the 10-year primary risk of ASCVD (atherosclerotic cardiovascular disease) among patients without pre-existing cardiovascular disease who are between 40 and 79 years of age. 1 Patients are considered to be at "elevated" risk if the Pooled Cohort Equations predicted risk is $\geq 7.5\%$.

Pooled Cohort Equations To Predict 10-Year Risk of First ...

Lipid profile or lipid panel is a panel of blood tests that serves as an initial screening tool for abnormalities in lipids, such as cholesterol and triglycerides. The results of this test can identify certain genetic diseases and can determine approximate risks for cardiovascular disease, certain forms of pancreatitis, and other diseases.. Lipid panels are ordered as part of a physical exam ...

Lipid profile - Wikipedia

The second set of the National Cholesterol Education Program (NCEP) treatment guidelines, published in 1993, focus on LDL cholesterol as the target for lipid-lowering therapy (Table). Accordingly ...

The National Cholesterol Education Program (NCEP) recommends that clinicians aim to reduce levels of non-high density lipoprotein (HDL) cholesterol as a secondary lipid-lowering target in their patients with residual elevation of serum triglyceride (TG) levels, defined as TG at or exceeding 200 mg/dL. The basis for this recommendation stems from a variety of epidemiologic and clinical trial ...

Managing Non-HDL Cholesterol

Hypertriglyceridemia, a condition in which triglyceride levels are elevated, is a common disorder in the United States (see the following image). It is often caused or exacerbated by uncontrolled diabetes mellitus, obesity, and sedentary habits, all of which are more prevalent in industrialized societies than in developing nations.

Hypertriglyceridemia Treatment & Management: Approach ...

Low-density lipoprotein (LDL) is one of the five major groups of lipoprotein which transport all fat molecules around the body in the extracellular water. These groups, from least dense, compared to surrounding water (largest particles) to most dense (smallest particles), are chylomicrons (aka ULDL by the overall density naming convention), very low-density lipoprotein (VLDL), intermediate ...

Low-density lipoprotein - Wikipedia

Non-high-density lipoprotein cholesterol (non-HDL-C) is the total amount of cholesterol contained in lipoproteins other than high-density lipoprotein (HDL).HDL is a particle that contains cholesterol, which is called HDL cholesterol or HDL-C. Non-HDL-C is calculated from the results of a lipid profile by subtracting the HDL-C result from the total cholesterol.
