Spinduction's unique, fully automated process can be used in factory and mobile applications, for cylindrical tubular parts, and combines high-efficiency induction heating with a kinetic cycle to provide a full-circumference weld in less than 60 seconds, regardless of material, diameter, or wall thickness.

Welding is a core activity in the fabrication factory, undertaken by skilled, qualified operatives working to a welding quality management system under the control of a Responsible Welding Coordinator. It is used to prepare joints for connection in the shop and on site, and for the attachment of other fixtures and fittings.

Thermite (/ ' θ ɜ :r m aɪ t /) is a pyrotechnic composition of metal powder, which serves as fuel, and metal oxide. When ignited by heat, thermite undergoes an exothermic reduction-oxidation (redox) reaction. Most varieties are not explosive, but can create brief bursts of heat and high temperature in a small area.

Plant floor design is the key to an efficient production environment. However, when laying out a new plant, changing the layout of an existing facility or adding a new assembly line, many engineers underestimate how many factors to consider. They only focus on equipment or material flow, instead of designing factories around lean principles, such as jidoka, kaizen and kanban.
